## Reasons for Allowance

The following is an examiner's statement of reasons for allowance: none of the prior art either alone or in combination disclose or teach of the claimed combination of limitations to warrant a rejection under 35 USC 102 or 103.

Specifically, with reference to independent claim 11, none of the prior art either alone or in combination, disclose or teach of the claimed ophthalmologic device specifically including, as the distinguishing features in combination with the other limitations, the eye tracker unit including an imaging system, the imaging system having at least two different adjustable magnifications, specifically a first magnification for determining a position of the eye relative to the optical axis and a second magnification to track a pattern of projected light marks on the eye.

Specifically, with reference to independent claim 18, none of the prior art either alone or in combination, disclose or teach of the claimed method for positioning an ophthalmologic device specifically including, as the distinguishing features in combination with the other limitations, the eye tracker unit with the wide-angle setting supplying signals containing the coordinates of the eye relative to the eye tracker unit and therefore also relative to the optical axis, the eye tracker unit generating a corresponding reference value from the claimed signals with respect to the amount of movement and direction for a positioning device and the changing of the magnification of the imaging system of the eye tracker after alignment in the x-direction and y-direction. Specifically, with reference to

independent claim 19, none of the prior art either alone or in combination, disclose or teach of the claimed method for positioning an ophthalmologic device specifically including, as the distinguishing features in combination with the other limitations, the selecting of a wide-angle setting of an objective of a stereo microscope of an image recording unit and the image recording unit supplying signals containing the coordinates of the eye relative to the image recording unit and therefore also relative to the optical axis, the image recording unit generating a corresponding reference value from the claimed signals with respect to the amount of movement and direction for a positioning device and the changing of the objective setting of the stereo microscope after alignment in the x-direction and y-direction.
